Dear Hiring Team,

I am writing to express my keen interest in the Senior Full-Stack Engineer position at Aiven. With 9 of experience as web developer and a proven ability to think laterally, I am eager to contribute to your team.

Aiven's commitment to open source and its vision of becoming the trusted data platform resonate deeply with me. While my contributions to open source projects have been on a smaller scale so far, I am excited about the prospect of expanding this aspect of my work. Moreover, I have extensive experience in supporting teams working on data platform applications, with my primary involvement in the project being the provision of components for data visualization. Data visualization in web applications is my expertise, and I am eager to leverage this skill to contribute to Aiven's success.

Throughout my career, I have tackled complex challenges, including refactoring front end side of applications in technologies Ruby on Rails and .NET, despite initially lacking experience in these areas. As a Full Stack Developer I was responsible for making necessary changes on the backend side of the applications. This experience underscores my ability to adapt and learn new programming languages and frameworks rapidly, a quality that I believe aligns well with the requirements of the Senior Full-Stack Engineer role at Aiven. My proficiency in TypeScript, React, Redux, and PostgreSQL, coupled with my passion for continuous learning, position me well to excel in this role.

Thank you for considering my application. I am eager to bring my skills and expertise to Aiven and contribute to its continued success.

Warm regards,

Szymon Sobiepanek
